

EVOLUTION OF JAVA

Evolution of Java

Key Founders

- Java was the brainchild of:
 - James Gosling
 - Patrick Naughton
 - Mike Sheridan
- The origin of Java can be traced back to the fall of 1991, and was initially called **Greentalk** later renamed to **Oak**.
- Oak was renamed as **Java** in **1995**

Design Goal

- Java was originally meant to be a platform-neutral language for embedded software in devices.
- The goal was to move away from platform and OS-specific compilers that would compile source for a particular target platform to a language that would be portable, and platform-independent.
- The language could be used to produce platform-neutral code.
